China and the Global Business Revolution

Introduction to Business

Geology in Petroleum Production

Oil and Gas Development

This book develops a general 'logic', or heuristic of discovery, to explain the emergence of novelty in individual thought, organizations, industries, and economies. It draws on a variety of literatures, discussing theories of organizational learning, evolutionary and institutional economics, knowledge and language. It brings these together in a unifying framework, and applies that for an analysis of innovation systems and the management of learning. Unification is based on the resource or competence-based view in economics, in combination with a theory of learning by interaction. The central theme of the book is the relation between stability and change. In business literature this theme appears in the relation between exploitation and exploration. In evolutionary economics it appears in the relation between selection and adaptation. The general heuristic shows how exploitation can provide the basis for exploration. The analysis is illustrated with many phenomena and empirical results from the different literatures.

Marketing Big Oil: Brand Lessons from the World’s Largest Companies

Oil and gas projects have special characteristics that need a different technique in project management. The development of any country depends on the development of the energy reserve through investing in oil and gas projects through onshore and offshore exploration, drilling, and increasing facility capacities. Therefore, these projects need a sort of management match with their characteristics, and project management is the main tool to achieving a successful project. Written by a veteran project manager who has specialized in oil and gas projects for years, this book focuses on using practical tools and methods that are widely and successfully used in project management for oil and gas projects. Most engineers study all subjects, but focus on project management in housing projects, administration projects, and commercial buildings or other similar projects. However, oil and gas projects have their own requirements and characteristics in management from the owners, engineering offices, and contractors’ side. Not only useful to graduating engineers, new hires, and students, this volume is also an invaluable addition to any veteran project manager’s library as a reference or a helpful go-to guide. Also meant to be a refresher for practicing engineers, it covers all of the project management subjects from an industrial point of view specifically for petroleum projects, making it the perfect desktop manual. Not just for project managers and students, this book is helpful to any engineering discipline or staff in sharing or applying the work of a petroleum project and is a must-have for anyone working in this industry.

coal, hailed as "america's ace in the hole" because this country holds about thirty percent of the recoverable reserve in the world, is being looked to as a viable solution to the encroaching energy crisis. surprisingly, while being a subject of intense current interest, the management of coal companies has until now remained a largely neglected field of research. concerned over how the coal industry could effectively contribute to the energy future, chakravarthy presents this comprehensive study on individual coal companies. the book is concerned primarily with management's strategic responses to the coal challenges that they have faced since the late 1960s.

Using the theory of organizational adaptation, it describes and examines the three distinct ways managers of coal companies are facing the problem of transforming the limiting aspects of their internal structure to fit the industry’s changing environment. Based on four in-depth case studies, the book proposes a model of adaptation, building on existing concepts in the field. (By demonstrating the descriptive power of the model, the study makes a simultaneous contribution to the theory of adaptation.) It also reviews the history of adaptation in the coal industry and describes the new challenges to which coal companies must respond, exploring the implications for both coal company management and federal energy planners.

The Changing World of Oil

The Market Structure of International Oil with Special Reference to the Organization of Petroleum Exporting Countries

The first steps towards restructuring and reorganizing the institutions and legislation of the Iraqi oil and gas industry must include taking ownership of resources, allocating acreages to Iraqi Kurdistan and neighbour states, improving the transparency as well as governmental participation and fiscal principles. It is important to provide an institutional framework that governs the operations of the industry, including its functions, structure, powers and funding. Operations in the upstream of the industry comprise licenses, leases and contracts. Other considerations covered are award processes, right of governmental participation, marginal fields, indigenous companies, termination and revocation of both licenses and leases, matters on fees, rents and royalties and, finally, provisions on Associated Natural Gas. The legislation in the downstream sector focuses on licensing, refining, marketing and pricing of oil products, transport logistics and facility management companies, pipelines and depots. The operating stocks and Iraq strategic stocks are also necessary. The needs of the downstream natural gas include both technical and commercial licensing regulations and conditions, as the network; gas supply licenses, transportation pipelines licenses and the whole sale market in addition to the possibility of third party access, customer protection, the pricing regime, public service obligations, competition and market regulation. The legislation is an amendment to the existing Iraqi Technical Service Contracts (TSC) and Production Sharing Contracts Agreements (PSC) in Iraqi Kurdistan based on the need to create a new fiscal framework that takes various compelling issues into consideration. It needs to capture the full gas value chain for taxation purposes in order to develop a fiscal regime for gas removed from oil and to create thereby a level playing field for all investors in gas and promoting the effective management of costs across the industry, which in turn will maximize the government's take. Other considerations revolve around the requirement to develop a fiscal system, which responds to changes in price, and to clarify inconsistencies or conflicts in the application of fiscal terms for oil and gas; and, finally, to develop a fiscal rule of general application based on a body of expected fiscal laws. Quality, health, safety and environment are missing elements in Iraq. During the restructuring and reorganization of the institutions the QHSE should take on a major role in working with the aforementioned departments in the Oil Ministry and the operating companies. The obligations of the state and international oil companies towards the state environmental regulations and public rules must be upheld according to the licensees, lessees and contractors considering matters of abandonment, decommissioning and disposal and their funding. The various actors in the oil and gas production are obligated towards various communities in the oil-producing region of the country, with supporting community development, providing employment opportunities, compensation, infrastructure, protection and management of the environment as essential components. The Ministry of Oil remains a civil service outfit that is ill-equipped to conceive and enact the required policies for such a complex and sophisticated industry. Hence, there is a strong need for principal and basic interaction between Federal Oil Ministry, existing directorial and state oil companies, Kurdistan Ministry of Energy and Natural Resources, and private sector operatives. This applies also to the reorganization and restructuring of Federal Oil Ministry, existing directorial and state oil companies, Iraqi National Oil Company and Iraqi National Gas Company.

China has used industrial policies to try to build large corporations that can challenge those based in more advanced countries. By the late 1990s the operational mechanism of China's large firms had seen large advances. Simultaneously, a revolution has taken place in global business systems, and China's large firms are even further behind the global leaders than when they began their reforms. The WTO will require China to operate rapidly on the 'global playing field' in competition with the world's leading corporations, and this increased gap presents a deep challenge for China's business and political leaders. Peter Nolan presents here the first in-depth case studies of China's large corporations under economic reform, combined with systematic benchmarking of these firms against the world's leading corporations. The book is an unrivalled resource of information on Chinese businesses, and also leads the reader to consider the impact of China's response to its current challenges not only on China itself, but on the wider global economy.

Information Technology Governance in Public Organizations

The Russian Federation is a leading oil producer and has a major oil supply system. This book describes the current Russian situation and prospects for the future development of its industry. Accurate data on the Russian system of oil pipelines are published here in English for the first time and will be useful to those interested or involved in the oil business. The book provides information on technologies used, including their technical and economic characteristics and current research. Part I discusses oil reserves and current resource base, prospects for their development, potential oil reserves, and those already explored. Part II discusses conditions under which oil is produced and describes features particular to Russian oil production, associated problems and technologies, including their engineering and economic aspects. Part III highlights the background, current state, and operational problems of the oil transportation system of the Federation and other countries of the former Soviet Union - one of the world's largest energy systems. Also reviewed are the technical state and operational reliability of the main pipeline network, including a general description of the pipeline system, design and construction of oil pipelines, repair and maintenance, and economic and control problems.

The predicted "ICT revolution" has gained increasing attention in the oil industry the last few years. It is enabled by the use of ubiquitous real time data, collaborative techniques, and multiple expertise across disciplines, organizations and geographical locations. Integrated Operations in the Oil and Gas Industry: Sustainability and Capability Development covers the capability approach to integrated operations that documents research and development in the oil industry. By 'capability', we refer to the combined capacity and ability to plan and execute in accordance with business objectives through a designed combination of human skills, work processes, organizational change, and technology. This book will serve as a knowledge base for those who are interested in learning about, and those involved in, Integrated Operations in the Oil and Gas Industry.

Cases in Operations Management

Sales and marketing professionals servicing the upstream oil and gas sector want to know their customer, but in an industry so complex, that is not always easy. J. Denver Smart provides a consolidated resource guide of upstream processing, key operations, and business drivers that are relevant to day-to-day operator challenges. It is specifically written to enable upstream product and service providers to identify the unique business value of their solutions. Topics covered include: • the primary market drivers and business parameters that affect the short- and long-term economic viability of upstream operators; • market indicators used to assess current and regional industry trends; • various lifecycle stages of an oilfield and their influence on primary business objectives; and • basic elements, principles, operations, and procedures associated with finding, extracting, and producing oil and gas reserves. The guide represents fifteen years' experience in targeting and enabling sales and marketing teams globally to drive incremental growth opportunities in the upstream industry. The content structure, root-cause problem profiles, and cause-and-effect summaries support collaborative problem solving, identifying solution value, and the development of engaging content marketing.

How Foreign Policy Decisions Are Made In The Third World

Strategic Management (color)

A practical book for geologists involved in petroleum production, here is a comprehensive review of basic techniques in production geology, the links with related subjects, and the function of geologists in the planning and operation of all phases of oilfield development. The first part discusses the basic techniques used in the analysis and graphic representation of the stratigraphy, tectonic structure, reservoir sedimentology and hydrocarbon distribution of an oilfield. The second part describes how this knowledge is applied in the various phases of field development. The mutual support between production geology and neighbouring disciplines such as seismology, log interpretation, reservoir engineering is stressed. Throughout the book, the text is secondary to the illustrations; these are examples, mostly hypothetical, of conditions and techniques discussed, designed so as to bring out as clearly as possible the importance of the points made. It is thus an ideal book for graduate students, specializing in petroleum geology and for participants in post-graduate courses, in universities or within industry.

Impact of Big Pharma Organizational Structure on R&D Productivity

This book examines trends and challenges in research on IT governance in public organizations, reporting innovative research and new insights in the theories, models and practices within the area. As we noticed, IT governance plays an important role in generating value from organization’s IT investments. However there are different challenges for researchers in studying IT governance in public organizations due to the differences between political, administrative, and practices in these organizations. The first section of the book looks at Management issues, including an introduction to IT governance in public organizations; a systematic review of IT alignment research in public organizations; the role of middle managers in aligning strategy and IT in public service organizations; and an analysis of alignment and governance with regard to IT-related policy decisions. The second section examines Modelling, including a consideration of the challenges faced by public administration; a discussion of a framework for IT governance implementation suitable to improve alignment and communication between stakeholders of IT services; the design and implementation of IT architecture; and the adoption of enterprise architecture in public organizations. Finally, section three presents Case Studies, including IT governance in the context of e-government strategy implementation in the Caribbean; the relationship of IT organizational structure and IT governance performance in the IT department of a public research and education organization in a developing country; the relationship between organizational ambidexterity and IT governance through a study of the Swedish Tax Authorities; and the role of institutional logics in IT project activities and interactions in a large Swedish hospital.
